

Topic: Driving school

Driving school for which we created an application making an appointment for the practical driving lessons between student and Instructor. We want remember the information about students and instructors as well as be able to create the lesson for both. Also we can store the information regarding the start time. End time and category of the lesson.

Student table:

Field name	Type	Required	Description
Student_id	integer	Yes	Primary Key
FirstName	varchar	Yes	Student's first name
